SUMMARY

CS student who builds products, ships them and iterates from the data. I run a mystery-content brand (**3.8M Reel views in 6 days**) and publish casual web games, using funnel, drop-off and engagement data to decide what changes in the next release. Seeking product, growth, analytics and AI automation roles.

EXPERIENCE

Founder & Product Lead — Looped Mysteries — *Instagram mystery brand + web game* Oct 2026 – Present

- **3.8M views across 5 AI-assisted Reels in 6 days**; the top Reel reached 2.66M views, 5.4K comments, 975 saves and 591 follows, and the account grew from 696 to 834 followers in 30 hours.
- Treated every Reel as an experiment: compared reach, shares, saves and follow conversion per post and changed the hook, case setup and visuals of the next upload based on what moved.
- Built a companion web game instrumented step by step (open → first clue → theory → accusation → solve): **459 opens, 293 unique devices, 523 case starts, 73% solve rate**, with drop-off tracked per case.
- Designed the paywall funnel ($1.99 single case, $3.99/mo Case Club, Gumroad case packs) and tracked each step from the locked-case screen (110 views) to checkout; first sales came from Instagram traffic.
- Automated a twice-daily KPI report merging Instagram, Gumroad and game data, with changes vs. the last snapshot.

Independent Game Developer — HTML5 casual games — *JavaScript, Three.js* Oct 2026 – Present

- Built 4 browser games with AI coding agents and handled Playgama, Yandex Games and GameDistribution submission (SDK, ads, store assets); **3 are live on Playgama**, led by **Tiny to Titan**, a 3D evolution game.
- Built a per-level funnel from 557 session event logs and found **half of all quits happened at levels 3–5**, where the XP needed for the next level jumped 5.5× in one step.
- Re-tuned the XP curve and redesigned the zone in v1.2.0; **first 40 new players vs 191 before: reaching level 4 rose from 61% to 78%, quits under 2 min fell from 25% to 15%, median session grew from 6.7 to 8.6 min**.
- Saw only 54% of starters reach the first evolution in test traffic, so added a 4-step tutorial and lowered the first goal; at the catalog launch, 96% of players reached it.
- Tagged every event with its build version to compare releases; shipped RU/TR localization for the Yandex launch.

AI Integration Intern — Öykü Lojistik — *Gebze, Kocaeli* Jul 2026 – Sep 2026

- Built a permission-scoped, multi-channel AI assistant system with **n8n, Supabase and the WhatsApp Cloud API**; about 20 automation flows are now in production.
- Mapped operational workflows with the company's AI specialist and turned them into testable automations.

PROJECTS

Text-to-SQL with Small Language Models — *Graduation Project (ENS 491), advisor Prof. Kamer Kaya* 2026 – 2027

- CPU-only ~1B-parameter model with schema-aware retrieval and execution-based verification, evaluated on BIRD and Spider 2.0; sprints run in Jira.

ATP Match Outcome Prediction — *Python, pandas, scikit-learn*

- Engineered features from 1968–2023 match data and compared Logistic Regression and Random Forest models.

boids_fishes — *agent-based ocean simulation game · github.com/ismailm1734/boids_fishes*

EDUCATION

Sabancı University — B.Sc. Computer Science and Engineering Expected June 2027

Full Scholarship · Dean's List, High Honor (Spring 2023–24)

Coursework: Machine Learning, Intro to Data Science, Database Systems, Probability, Statistical Modelling

SKILLS

Product & Growth: funnel and drop-off analysis, release-over-release comparison, KPI reporting, retention, short-form content strategy, localization, multi-platform publishing

Data & AI: Python (pandas, scikit-learn), SQL, n8n, Supabase, REST APIs, event instrumentation, LLM tooling and AI coding agents (Claude Code)

Programming: Python, JavaScript (Three.js, Vite), C++, SQL, PHP, Git

Languages: Turkish (native) · English (advanced) · Spanish (beginner)

Activities: SU Economics & Management Club, sponsorship & events team · WWF × Kadıköy Municipality volunteer report
