

İSMAİL MEMİŞ

Computer Science & Engineering Undergraduate · Sabancı University

Istanbul, Türkiye · ismail.memis@sabanciuniv.edu · +90 545 531 61 32 · github.com/ismailm1734

PROFILE

Computer Science and Engineering undergraduate with hands-on project experience across data science, full-stack development, and systems programming. Comfortable in Python, SQL, and C/C++, with a strong interest in digital products and turning user behavior into models and metrics. A fast, reliable team contributor, currently gaining professional experience integrating AI into real-world logistics systems.

EXPERIENCE

Öykü Logistics — AI / Data Intern | Gebze, Kocaeli · Jul 2026 – Sep 2026

Supporting the integration of AI solutions into the company's 360° logistics platform (customs, warehousing, transportation, and more), starting with the customs department. Working alongside an AI specialist and the IT team on data-driven features, using Python and SQL.

PROJECTS

Interactive Product Economy Simulator — Self-initiated · JavaScript / interactive web app

Built and shipped an interactive web app that models how a digital product's difficulty/engagement curve translates into user retention and revenue, simulating a 1,000-user cohort across 120 stages. Models upsell moments and gating mechanics as monetization levers and visualizes the engagement-vs-revenue trade-off with a live sweet-spot finder. Live demo and code on GitHub.

Tennis Match Outcome Prediction — Introduction to Data Science (DSA 210) · Python

Predicted ATP match winners from historical match data; engineered ranking and contextual features (surface, tournament level, seed), applied one-hot encoding and feature scaling, and trained and compared Logistic Regression and Random Forest classifiers using scikit-learn.

Smart Parking Reservation System — Database Systems · Solo

Designed and implemented a parking reservation system with a PHP backend and a hybrid data layer combining MySQL/MariaDB and MongoDB; wrote stored procedures and triggers for reporting and data integrity.

Campus Club Event Management System — Database Systems · Team

Built a campus club event management system with a support-ticket module (PHP, MySQL, MongoDB); implemented stored procedures (event listing with JOINs, student registration) and triggers for data validation.

Systems & Hardware Programming — Operating Systems / Digital Design · C, C++, Verilog

Implemented an LC-3 virtual machine with virtual-memory paging, a semaphore-based synchronization system and a work-stealing task scheduler, and an FPGA countdown timer with a 16-bit LFSR (validated with testbenches).

EDUCATION

Sabancı University — B.Sc. in Computer Science and Engineering (FENS)

Istanbul, Türkiye · Expected Graduation: 2027 · Full (100%) Merit Scholarship

Relevant coursework: Data Structures, Algorithms, Operating Systems, Database Systems, Mobile Application Development, Introduction to Data Science, Probability, Statistical Modelling, Linear Algebra, Discrete Mathematics.

TECHNICAL SKILLS

Languages: Python, C, C++, SQL, JavaScript/HTML, PHP, Verilog

Data & Analytics: pandas, scikit-learn (Logistic Regression, Random Forest), Excel, Jupyter

Databases & Tools: MySQL / MariaDB, MongoDB, Git, Linux, macOS

ACTIVITIES & INVOLVEMENT

EİK — Economics Club — Sponsorship & Events Team (1 year)

Contacted and negotiated with companies to secure sponsorships and partnerships for club events.

SU Horseada — Horse Riding Club — Active member (1 year)

LANGUAGES

Turkish (Native) · English (Advanced)
